IntelliShift

Accurate Vehicle Data for Powerful Fleet Intelligence

Are you experiencing:

Matching up your work orders to techs in your head?

Spending several hours per week verifying times?

Inaccurate stop times and reports due to hardware?

Difficulty getting a response from your telematics provider?

Misalignment on safety, fuel, or maintenance?

Stress-Free Dispatching

In Dispatch Board, easily cross reference available technicians and vehicles with current work orders, organize routes and schedules, and track job progress.

Payroll Verification

Powerful reporting capabilities make it a breeze to map vehicle location and status data with timecards to verify work order payroll hours.

Dedicated Hardware

Choosing to use telematics hardware instead of mobile devices provides consistently reliable data.

Responsive Customer Service

We provide unmatched in-house customer support, based in the USA.

Complete Fleet Program

IntelliShift allows fleet safety and operations teams to leverage AI dash cams, telematics, fuel, inspections, maintenance, and compliance technology from one vendor.

The IntelliShift integration with SAMPro® Enterprise Field Service Software by Data-Basics, Inc.® delivers the context and visibility you need to improve field service business operations.

Data from IntelliShift is pulled into your SAMPro system for use with DBFleet®. This integration provides a consolidated view of scheduled work orders and vehicle data. Easily access technician, job, and asset details, as well as in-depth reports and analytics.

Already have telematics?

Switching gives you so many benefits and is easier than you think.

Reliability matters.

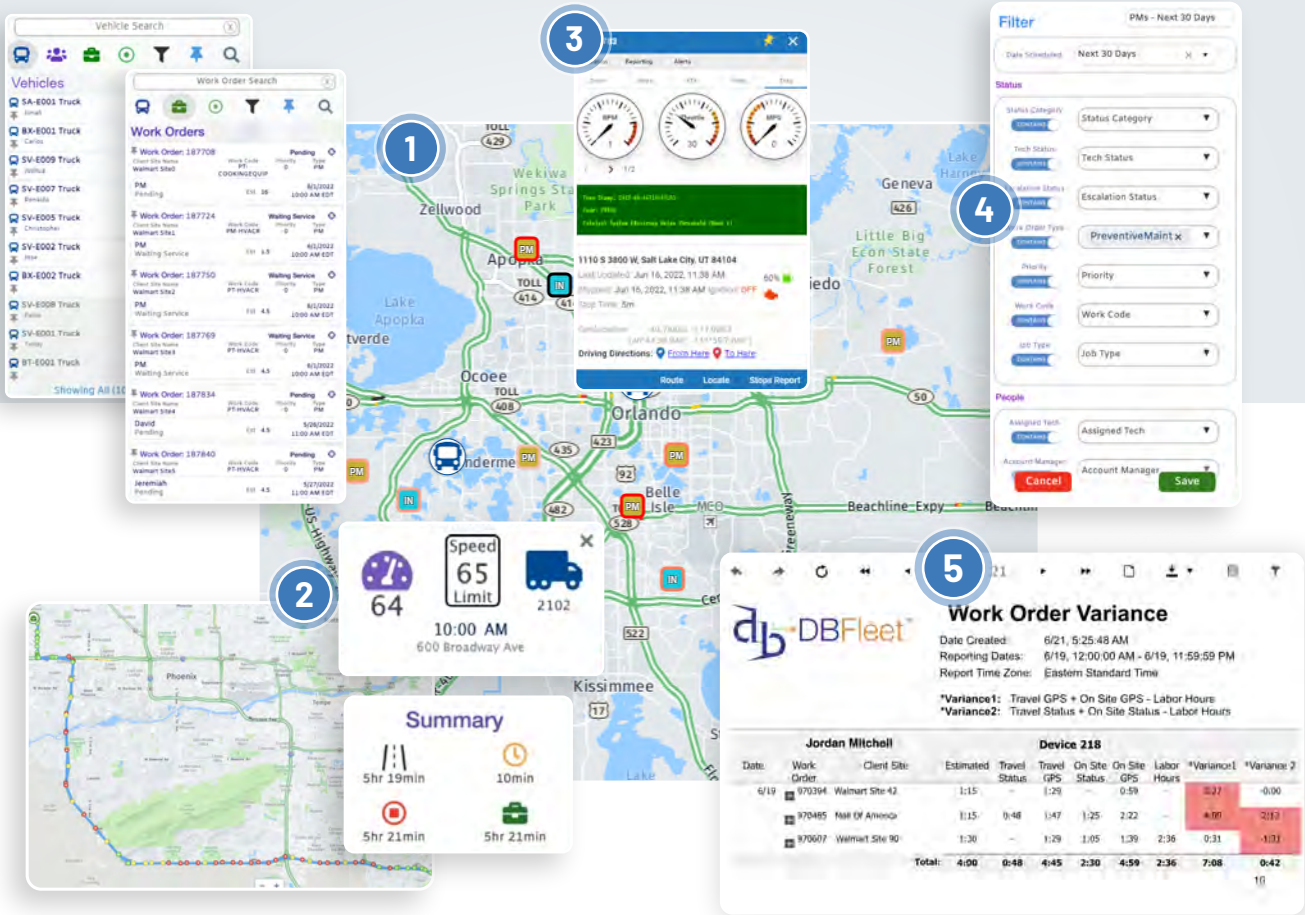

So does implementation and support. At IntelliShift, we do things differently. We provide unmatched in-house customer support, based in the USA. But don't take our word for it, check us out on G2.

The reliable data from IntelliShift integrated into DBFleet means we can better manage work orders and validate timecards. That translates into time and money saved every day.

Ed Berry, VP, Conserv Building Services

IntelliShift: Powerful Fleet Intelligence Made Simple

1

Integrated interactive maps

A unified view of vehicle locations, technicians and work orders facilitates dispatching, management, and changes on-the-fly. With a click, access in-depth information and different live map views.

2

Accurate location and route data

See the real-time location of vehicles in relation to work orders to better manage technician time and routes. Get details on travel duration, speed, stops, onsite time and idling.

3

Deep vehicle telematics

IntelliShift monitors engine performance and diagnostic trouble codes so you can keep up with preventative maintenance and address issues up front. Avoid unplanned downtime and increase the lifespan of your assets.

4

Customizable filter settings

Search for and create groups by technicians, vehicles or work orders to focus on what's important. Save views to make in-the-moment decisions on assignments, vehicle maintenance and more.

5

Powerful reporting & analytics

Variance reports compare work order status and time with vehicle data and logged labor hours to highlight discrepancies. IntelliShift analytics delivers views and reports on fleet utilization and activity for even deeper visibility.
